

# The IMSA Great Minds Program®

Jack Horner

Great Minds Community Lecture

Wednesday January 22, 2003

**Dinosaur Science in the 21st Century** Jack Horner, Paleontologist, Curator of Paleontology, Museum of the Rockies and Professor, Montana State University

Recent dinosaur discoveries in Montana and new technological methods (like CAT-scanning and bone histology) are expanding the world of paleontology and advancing dinosaur science. Join Jack Horner as he explains how fast dinosaurs grew, how long they lived, what their skin was like, how fast they ran, and whether they're more birdlike than previously thought.

This lecture is made possible in part by a grant from the Tellabs Foundation.
